

Case Study:

34Ten Architecture

Industry: Architecture and Design

Location: Chicago, IL

Challenge

34Ten started in Josh's house, with the entire business running from a single desktop computer. When it was time to expand and move to an office, the need for a reliable and fast solution to store, access, and share data became essential.

Solution

As part of building the technology infrastructure for the new office space, we assessed Josh and his team's current workflow and future goals. Recognizing the need for speed, flexibility, and easy access, we implemented a high-speed local network storage system that seamlessly integrates with Microsoft Cloud.

Results

Implementing shared network drive access for the 34Ten team enabled seamless teamwork while enhancing their file organization. It also ensured that a single computer failure wouldn't disrupt business operations. With seamless synchronization to Microsoft Cloud, team members could access company data remotely, even on mobile devices while on the go. This monitored storage and collaboration system allowed 34Ten's hybrid workforce to double their productivity through improved efficiency and flexibility.
