

Case Study:

34Ten Architecture

Industry: Architecture and Design

Location: Chicago, IL

Challenge

34Ten's Architecture's story began in Josh's house, with the entire business operating from a single desktop computer. When the time came to expand and move to an office space, the demand for a reliable and fast IT solution to store, access, and share data quickly as a team became imperative.

Solution

34Ten's Architecture's story began in Josh's house, with the entire business operating from a single desktop computer. When the time came to expand and move to an office space, the demand for a reliable and fast IT solution to store, access, and share data quickly as a team became imperative.

Results

Implementing shared network drive access for the 34Ten team made seamless collaboration possible while enhancing their file organization system. It also ensured that a single computer failure wouldn't disrupt the business, enhancing their business continuity. Seamless synchronization with Microsoft Cloud allowed remote access to the company's data, even on mobile devices while on the move. With this monitored storage and collaboration system in place, 34Ten's hybrid workforce doubled their productivity thanks to improved collaboration and flexibility.
